SECURITY PROFESSIONALS ARE LEARNING THAT

**A ONE TOUCH SECURITY SOLUTION DOES EXIST.**

The answer is in your hands.

DNA Fusion is the most IT-Centric solution available today to meet your security needs.

Unlike other access control software out there, DNA Fusion combines the best in access, video, data, and audio. And it is all available through Open Options as a single source of distribution.

dnaFusion™

THE OPEN PLATFORM ACCESS SOLUTION

DNA Fusion is designed with an open platform approach. Built from the ground up to work with the industry standard Mercury Security access control panels, DNA Fusion delivers all the power and features available in a clean and easy-to-use interface.   When integrated with other Open Options products, such as WayPoint Visitor Management, OpenDX, Photo ID, or with any of our leading technology partners' products, DNA Fusion delivers the best fit possible for any client.

Advanced User Interface with built-in HTML Viewer

InfoReady™ Design provides easy and immediate access to all of your system data.

Personnel Groups simplifies the management of people and access levels.
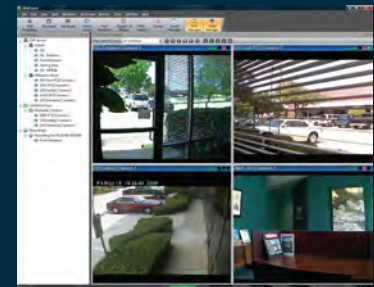

Drag and Drop makes system setup and navigation quick and simple.

System Wide Macros deliver a powerful way to link any system event to any host-based or system action.

Global Hardware Edit and Control gives you the power to modify and control multiple hardware objects at once.

simplifying **IP Access Control**

DNA Fusion offers a complete access control solution for any organization ranging from the multi-campus enterprise to a single lobby entrance. DNA Fusion allows users to monitor and manage several integrated systems through one common interface.
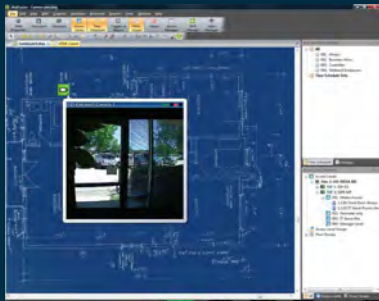

By combining access control, IP video management, and critical communications, DNA Fusion is designed to provide the simplest and most complete security solution available. Features such as "drag and drop" functionality, custom menus, and advanced alarm handling with routing and escalation are just a few of the components that make DNA Fusion the most reliable and effective source for any organization's access control requirements.

Open Options understands that no two installations are exactly the same and that every client has different security needs. DNA Fusion was developed to include **broad customization features** and integration options, providing the best system possible regardless of the facility.

Mobile & Web Clients

DNA Fusion can be remotely managed with Fusion Mobile™ and Fusion Web™ for secure access control on the go.

Map module presents a graphical way to plot and control hardware and cameras.

Simple Scheduling lets you schedule any system action or event once or on a recurring basis.

Tenants (Segmented Database) allows viewing of people and hardware relative to a local site.

Integrated Photo ID streamlines the creation of secure access credentials and photo verification.

Advanced User Interface customizes tool bars, windows and the operator environment to fit your needs.
